

QuickSnap

The lock with the unmistakable click-clack sound.

The latest generation of locks has been released, for use with all bins, pallet boxes and containers made from TRIPLEX structured-core panels.

Simply 'click' to open or 'clack' to close

QuickSnap is the perfect lock. You can see how it works straight away, just by looking at it – it's quite obvious. You won't need it explained; it can't go wrong. There's an audible click when it opens and a 'clack' when it closes. It's as simple as that.

The QuickSnap doesn't need extra parts; it doesn't need spares. It has the same outstanding properties as our structured-core panels. When it comes to weather and moisture resistance, the QuickSnap performs – it closes the side walls completely so that water and dirt can't get inside.

Its durability has also been tested, and the results show that the innovative QuickSnap lock doesn't age or deteriorate. The high quality of the material is apparent at first glance. And as only one type of plastic is used, you'll find it easier to recycle than usual.

The advantages of the QuickSnap lock (an utility patent) is available to all TRIPLEX customers, as the lock is system-independent, which means it can be integrated into any given pallet enclosure.

You'll find more detailed information about
TRIPLEX pallet enclosures and locks at
